

Prompt

You are provided with a Source, Translation and a Translation quality analysis. The Translation quality analysis contains a translation with marked error spans with different levels of severity (Very Low, Low, Default, High, Very High) along with the error type (Accuracy (addition, mistranslation, omission, untranslated text), Fluency (character encoding, grammar, inconsistency, punctuation, register, spelling), Style (awkward), Terminology (inappropriate for context, inconsistent use), Non-translation, Other, Source error, Transliteration, and No-error). Given this information, generate an explanation for each error and a fully correct translation. You have to correct all the errors pointed out in the error span. If the sentence has multiple error spans, write explanations of all the errors together, in a single paragraph. If there is no error pointed out, the corrected translation will be same as translation.

Input

3 In-context examples

Source: This gives them a wider range of small places to hide from predators.

Translation: यह उन्हें शिकारियों से छिपाने के लिए छोटे स्थानों की एक व्यापक श्रृंखला देता है।

Translation quality analysis: Error Span 0: छिपाने\nError Type 0: Fluency_Grammar\nError Severity 0: Very High\n

Output

Explanation: The error in the translation is related to fluency and grammar. The word 'छिपाने' is incorrectly used in the sentence. The correct word should be 'छिपने' which translates to 'to hide'. The incorrect usage of the word disrupts the fluency and grammatical structure of the sentence.

Corrected Translation: यह उन्हें शिकारियों से छिपने के लिए छोटे स्थानों की एक व्यापक श्रृंखला देता है।
